There are many programs for saving your vital data and programs; some are separate programs and some are built into the operating system. One which has been around for many years is Acronis, a program provided by a Swiss company.

Acronis has had a backup program for many operating systems, providing new versions as operating systems have changed. The result is a proliferation of different versions, each doing essentially the same job. The most recent version, however, does backup and considerably more.

The newest version, called True Image New Generation, offers protection from ransomware, Notary which assures that data you've backed up is authentic and unchanged, Security which makes sure that data is secure against intervention or alteration, Cloud backup, and Mobile backup.

This program does a lot and yet it is easy to use. A free trial is available.
