

## Immotor Go...

by George Harding

February 19, 2017

For those who have long walks from train/bus/car to the office, Immotor may be a perfect solution. It is a motorized trike that is very compact and easy to use.

It is stable because it has three wheels and runs its motor from an enclosed battery. Not only that, it is very portable, being easily collapsed when not in use.

This device is equipped with an electric motor powered by a battery pack that is rechargeable either when installed or outside of the device. The battery can be used to power other items using 110v power, if desired.

Immotor has GPS installed, which keeps track of where you are and where you want to go. It detects motion and tracks safety and accident awareness.

It is available for preorder for \$1,099, a substantial discount from its regular price of \$1,499. It is shipped from China.
