Today's cell phones and other devices have very capable batteries, which last for a considerable time, but when they give out unexpectedly, you are left in a world of hurt!

Enter the HubMini. Here is an excellent example of a carefully designed external battery in a form that is not only good looking but also easy to use. It has a sleek shape that fits easily in your hand and can be stored in a pocket or purse.

The HubMini has two connecting wires that fit compactly into the case. One is a Lightning connector for the various iPhone cell phones. The other is a micro-USB connector. With these two, you are set to recharge almost any cell phone available today.

It also has a button which shows the internal charge status, showing one to four lights. Full charge is indicated by four lights. The company says the HubMini can charge a cell phone twice when fully charged.

The HubMini has a charging capacity of 3300mAh and can charge two devices at the same time.

There is a USB port for charging. The unit comes with a cable for this purpose.

This is a handy, compact and useful product for today's smart phones.
