Here's the charger for you: it is fast, it has cables built in, it works with any smartphone, it charges itself from any wall socket, and it is reasonably priced. What could be better than that?

The "Hub Turbo" is a new product with Power Delivery and Qualcomm Quick charge to allow 75% faster USB charging.

It's so easy, too, because the cable you need is built in and ready to use. There are two cables, one with the Lightning connector and one with a USB-C connector.

If you have some other type of connector, use your cable with the built-in USB port.

Charging the charger is simple, just plug it into the wall with the built-in prongs. It charges itself 50% faster than other powerbanks, according to the manufacturer.

The device is powered by a lithium-ion battery, which is safe to include in your carry-on bag.

I was provided with a "Hub Turbo 6700", which provides 670 mAh power, sufficient to power just about anything: cell phones, tablets, portable speakers, etc.

The myCharge company offers other chargers in this line, at similar prices.
